Aniket (Indtekina) Das

Full-Stack Developer

indtekina2@gmail.com — +91-7319461368 — GitHub — Portfolio

Summary

Entry-level Full-Stack Developer with hands-on experience building and deploying web applications using React, JavaScript, Node.js, Express, MongoDB, and WebSockets. Experienced with REST APIs, authentication, real-time communication, responsive UI development, and debugging full-stack applications. Interested in building practical software products and growing toward software engineering and scalable backend systems.

Education

Bachelor of Technology in Electrical Engineering 2026 – Present
Sant Longowal Institute of Engineering and Technology Longowal, Sangrur district, Punjab, INDIA

Technical Skills

Languages	JavaScript, HTML, CSS
Frontend	React, Vite, Responsive Web Design
Backend	Node.js, Express.js, REST APIs, WebSockets
Database	MongoDB
Authentication	JWT, bcrypt, protected API routes
Tools	Git, GitHub, VS Code, Postman
Deployment	Vercel, Render

Projects

LinkUp — Real-Time Messaging Web Application Live Demo
React, Node.js, Express, MongoDB, Socket.IO, JWT

- Built a full-stack real-time messaging application with React on the frontend and Node.js/Express on the backend.
- Implemented JWT-based authentication, protected API routes, user sessions, and password hashing using bcrypt.
- Integrated WebSockets for real-time messaging and online/offline presence indicators.
- Designed responsive messaging interfaces and handled client-side state, conversation updates, and real-time socket events.
- Deployed the application using Vercel, Render, and MongoDB Atlas.

Personal Portfolio Website Live Demo
React, Vite, JavaScript, HTML, CSS

- Designed and developed a responsive personal portfolio website to showcase projects, technical skills, and development work.
- Built reusable React components and implemented responsive layouts across desktop and mobile screen sizes.
- Deployed the production website using Vercel.

Weather Application GitHub
React, JavaScript, HTML, CSS, REST API

- Built a React-based weather application that retrieves and displays real-time weather information through an external API.
- Implemented asynchronous API requests, dynamic UI updates, and user-driven location searches.

Movie Search Application GitHub
JavaScript, HTML, CSS, OMDb API

- Developed a movie search application using the OMDb API to retrieve and display movie information dynamically.
- Implemented API integration, search functionality, and responsive result presentation using vanilla JavaScript.

Additional Projects

- **Todo Application** — Built a browser-based task management application with interactive task creation, editing, and deletion.
- **Stone Paper Scissors** — Developed an interactive browser game using JavaScript with dynamic game logic and user interaction.

Additional

- Self-taught full-stack web development through hands-on projects and independent software development.
- Regularly use Git and GitHub for source control and project development.
- Interested in software engineering, distributed systems, machine learning, and building startup-oriented products.
